2 Analysis 4

3 Results 5

4 Conclusion 6

Appendices 9

1 Introduction

Please note that the use of Overleaf is not recommended for ATLAS drafts because the physics office workflows described here are only supported when working in repositories in CERN GitLab. This template is fine to use for quick documents that do not require physics office tools, or when preparing a draft before inserting it back into GitLab.

If you really want to combine the use of GitLab and Overleaf, have a look at the instructions on this page.

Place your introduction here.

2 Analysis

You can find some text snippets that can be used in papers in `latex/atlassnippets.sty`. To use them, provide the `snippets` option to `atlasphysics`.

3 Results

Place your results here.

4 Conclusion

Place your conclusion here.

The supporting notes for the analysis should also contain a list of contributors. This information should usually be included in `mydocument-metadata.tex`. The list should be printed either here or before the Table of Contents.

32

Appendices

In an ATLAS note, use the appendices to include all the technical details of your work that are relevant for the ATLAS Collaboration only (e.g. dataset details, software release used). This information should be printed after the Bibliography.
